Subject: question: [Ex. 6 - Personal Privacy] home

See my question below and Miguel's response—I guess if the [Ex. 6 - Personal Privacy] are still using bottled water for drinking and cooking, then they probably wouldn't have any type of GAC filter or RO unit on their house, but we don't know. If the [Ex. 6 - Personal Privacy] still have their iron filter at the entry point to their home, I wonder if the chlorine could be oxidizing iron.

I haven't spoken to [Ex. 6 - Personal Privacy] so I don't know, but information on the Flint Water Update website, which is recent, says that the [Ex. 6 - Personal Privacy] are still using bottled water for drinking/cooking.

Subject: question: Ms [Ex. 6 - Personal Privacy] home

Hi, Miguel. We had a call yesterday with MDEQ and were discussing Marc Edwards' website. MDEQ thought that [Ex. 6 - Personal Privacy] home has a whole house filter that would remove chlorine in

addition to lead and other contaminants, such as a GAC filter. I said that when you and I were out there in late April/May, that there was no whole house GAC filter or other tap or under-sink filter; she had an iron filter at the entry point to her home—but an iron filter wouldn't remove chlorine, though chlorine could oxidize the iron. Do you know if [REDACTED] has installed a whole house GAC filter, or tap GAC filter or under-sink GAC filter since then?
